

credit cards

Credit card processing Free or low-cost software options.

No more terminals! Credit card sales are easier when your POS system has built-in credit card support. When you process credit cards in Point of Success, every computer on your network can be a credit card terminal.

Choose the best option for your restaurant

Open a merchant account through Mercury Payment Systems, the preferred credit card processor for Point of Success. Or you can continue with your current credit card processor by using *PCCharge Payment Server* software with Point of Success *PCCharge Connector* software.

Mercury Payment Systems

Mercury Payment Systems specializes in credit card processing integrated in point of sale systems.

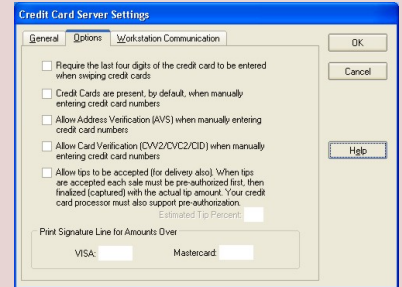

- Software for processing with Mercury Payment Systems is included at no charge in Point of Success Standard and Point of Success Premium software
- Mercury's fees can be very competitive, in many cases offering merchants savings over their current processor
- Delivery restaurants can use two merchant accounts with Mercury (one for dine-in or carry-out when a card is present, and a separate account for delivery telephone orders) to save on processing and discount fees

Continue with your existing processor

Using *PCCharge Payment Server* will in most cases allow a restaurant to continue with their current credit card processor. Purchase of *PCCharge Payment Server* and Point of Success *PCCharge Connector* software is required.

A centralized credit card server handles processing for all workstations on the network, communicating charge and authorization information for each transaction.

Credit card processing in Point of Success improves security and minimizes charge-backs. Settings in the software allow merchants to require the last four digits of the credit card to be keyed, validation of card ID numbers, and cardholder address confirmation for deliveries.

Mercury Payment Systems is the recommended credit card processor for Point of Success.
